INDEX TO

THE WELDING JOURNAL

VOLUME 36—1957

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page allocation by issues

January	1–104	July	669–764
February	105–210	August	765–862
March	211–338	September	863–960
April	339–448	October	961–1060
May	449–558	November	1061–1158
June	559–668	December	1159–1260

Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page allocation by issues

January	1-s–56-s	July	313-s–352-s
February	57-s–104-s	August	353-s–392-s
March	105-s–168-s	September	393-s–432-s
April	169-s–216-s	October	433-s–472-s
May	217-s–264-s	November	473-s–512-s
June	265-s–312-s	December	513-s–552-s

THE WELDING JOURNAL

SUBJECT INDEX

Acetylene vs. Inert Gas in Welding Aluminum Alloys, Hydrogen vs.—J. Koziarski, 141–148.

Adams Lecture, 1956—Welding Precipitation-Hardening Stainless Steels—George E. Linnert, 9–27.

Adams Lecture, 1957—Evolution of High-Tensile Weld Metal with Low-Hydrogen Electrodes—D. C. Smith, 677–692.

Aircraft Applications, Design and Technique Requirements for Arc Welding Titanium in—R. Meredith and B. L. Baird, 371–377.

Aluminum Alloys, Automatic Inert-Gas-Shielded Tungsten-Arc Welding of—H. D. Mann and R. E. Purkhiser, 790–797.

Aluminum Alloys, in Welding, Hydrogen vs. Acetylene vs. Inert Gas—J. Koziarski, 141–148.

Aluminum, Zinc Soldering of—I. B. Robinson, 992–997.

Application of Inert-Gas Tungsten-Arc Welding to Carbon-Steel Pipe—F. J. Pilia and R. W. Minga, 363–370.

Argon-Hydrogen Shielding-Gas Mixtures for Tungsten-Arc Welding—T. McElrath and E. F. Gorman, 28–35.

Aspects of Crack Sensitivity in Machinable Deposits on Cast Iron—R. D. Wasserman, J. F. Quaas and J. P. Broderick, 481–488.

Austenitic Stainless Steel to Ferritic Steel in Cylindrical Shapes, Butt Welding—J. E. Donahue, 1074–1077.

Automatic Inert-Gas-Shielded Tungsten Arc Welding of Aluminum Alloys—H. D. Mann and R. E. Purkhiser, 790–797.

Automatic Welding Applications at an Oil Refinery—R. C. Wheeler and R. M. Kolb, 347–355.

Boiler-Code Welding and Joint Design with the CO_2 Process—J. D. Carey, Jr., 877–880.

Brazing and Hard-Surfacing Alloys—A Proposed Method, Thermal Analysis of—Forbes M. Miller, 986–991.

Bridges, Highway, Design, Fabrication and Erection Practices for Efficient—Omer Blodgett, 583–592.

Butt Welding Austenitic Stainless Steel to Ferritic Steel in Cylindrical Shapes—J. E. Donahue, 1074–1077.

Carbon Dioxide Process, Boiler-Code Welding and Joint Design with the—J. D. Carey, Jr., 877–880.

Carbon Dioxide Welding Process, New—A. F. Chouinard and R. P. Monroe, 1069–1073.

Cast Iron, Aspects of Crack Sensitivity in Machinable Deposits on—R. D. Wasserman, J. F. Quaas and J. P. Broderick, 481–488.

Castings, Steel, Flame Washing of—A. F. Chouinard, 219–224.

Chrome-Moly Electrodes, Welding of High-Temperature High-Pressure Piping with—Discussion by D. C. Smith, 41; Author's Reply, 41–42.

Consumable-Electrode Inert-Gas Welding with Small-Diameter Wires—K. E. Richter and J. F. M. Essig, 893–899.

Design and Technique Requirements for Arc Welding Titanium in Aircraft Applications—R. Meredith and B. L. Baird, 371–377.

Design, Fabrication and Erection Practices for Efficient Welded Highway Bridges—Omer Blodgett, 583–592.
Developed Procedures for the Flexible-Electrode Submerged-Arc Welding Process—M. H. Fritsche, 466–474.

Editorial Preview

World's Heaviest Unit of Atomic Power Equipment Built for Shippingport—269–270.

Electrical Requirements for Automation in Arc Welding—R. W. Tuthill and R. D. Mann, 980–985.
Electrode Control in an Alloy Pressure-Vessel Plant—W. W. Weber, 798–801.
Electrodes, with Low-Hydrogen, Evolution of High-Tensile Weld Metal—Adams Lecture, 1957—D. C. Smith, 677–692.
Engineer Looks at the Welding Industry—Charles Kandel, 786–789.

Flame Washing of Steel Castings—A. F. Chouinard, 219–224.
Fluxes, Bonded, for Submerged-Arc Welding of Alloy Steels—Hallock C. Campbell and Wallace C. Johnson, 1078–1084.

Gamma Radiographic Control of Welded Transmission Lines—Discussion by Frank C. Parker, 1096–1097; Author's Reply, 1097.
Gas-Shielded Metal-Arc Welding of High-Pressure Valves—Fred R. Zacheus, 593–596.
Gas-Shielded Welding, New Power Sources for Metal-Arc—A. U. Welch, 36–40.
Greater Acceptance of Welding Through the Use of Inspection Methods—John R. Harrer, 252–256.

Hardening, Steel, Rockets for—James A. Browning, 225–229.
Heat-Exchanger Fabrication—P. Patriarca, G. M. Slaughter and W. D. Manly, 1172–1178.
High-Frequency Resistance Welding—Wallace C. Rudd, 703–707.
Hydrogen vs. Acetylene vs. Inert Gas in Welding Aluminum Alloys—J. Koziarski, 141–148.

Important Procedures in Proper Welding Shop Management—Joseph L. Fortunato, 567–575.
Industrial Radiography by Gamma-Ray Projection from Radioactive Isotopes—Charles M. Dick, 457–462.
Inert-Gas, Consumable-Electrode, Welding with Small Diameter Wires—K. E. Richter and J. F. M. Essig, 893–899.
Inert Gas in Welding Aluminum Alloys, Hydrogen vs. Acetylene vs.—J. Koziarski, 141–148.
Inert-Gas Tungsten-Arc Butt Welding of Zircaloy-2 Tubes—J. W. Lingafelter, 230–235.
Inert-Gas Tungsten-Arc Spot Welding of an Automotive Transmission Subassembly—W. G. Mertens and O. J. Ryder, 871–876.
Inert-Gas Tungsten-Arc Welding to Carbon-Steel Pipe, Application of—F. J. Pilia and R. W. Minga, 363–370.
Inert-Gas Welding, Shielding Gases for—W. H. Helmbrecht and G. W. Oyler, 969–979.
Inspection Methods, Greater Acceptance of Welding through the Use of—John R. Harrer, 252–256.

Joint Design for Making Root-Pass Welds without Filler Metal—L. C. Lemon and W. R. Smith, 240–242.

Leak Prevention—Through In-Process Leak Detection—Richard P. Turner, 1167–1171.

Magnetic-Flux, Manual, Gas-Shielded Arc Welding of Mild Steel—N. Davis and R. T. Telford, 475–480.
Magnetic-Force Welding, Recent Developments in—E. J. Funk, 576–582.
Maintaining Workmanship Standards for Quality Welding—Howard B. Cary, 773–778.
Metal-Arc Gas-Shielded Welding, New Power Sources for—A. U. Welch, 36–40.
Metal-Arc Welding of High-Pressure Valves, Gas-Shielded—Fred R. Zacheus, 593–596.
Metal Gathering by the Resistance-Heating Process—W. F. Haessly, 132–140.

New Concept for Control of Resistance-Welding Machines—W. J. Farrell and J. L. Solomon, 356–362.
New Concept of Welded Design for Improved Vibration Control—Omer Blodgett, 779–785.
Nuclear Reactor Application, Peripheral Welding of Internally-Clad Steel for—W. Leonard and J. C. Thompson, Jr., 243–251.
Nuclear Reactors, Welding Problems in Pressure Vessels for—R. E. Lorentz, Jr., 881–887.

Oil Refinery, Automatic Welding Applications at an—R. C. Wheeler and R. M. Kolb, 347–355.

Peripheral Welding of Internally-Clad Steel for Nuclear Reactor Application—W. Leonard and J. C. Thompson, Jr., 243–251.
Pipe, Carbon-Steel, Application of Inert-Gas Tungsten-Arc Welding to—F. J. Pilia and R. W. Minga, 363–370.
Pipe, Study of Interrupted Welding of Heavy-Wall Steam—I. A. Rohrig, J. O. Smith and E. G. Shifrin, 128–131.
Power Sources, New, for Metal-Arc Gas-Shielded Welding—A. U. Welch, 36–40.

Practical Welder and Designer

All-Aluminum Shower Enclosures for Passenger Liners, 384.
Aluminum-Bronze Fabricated Hawse Pipes for Longer Service Life—William F. Hoffmann, 904.
Aluminum-Bronze Overlays and Cast Bushings Operate Cheatham Dam Gates—William J. Fauser, 1002.
Aluminum Covers Protect High-Tension Bus Bars, 260.
Aluminum Gas-Carrying Pipe Line Installed in Texas Rural Area, 493.
Aluminum Oil Tanks, Speeding Production of, 804–805.
Aluminum Replaces Steel in Lumber Rolls, 378.
Argon, Carbon Dioxide and, Used on Different Seams for High-Volume Welding—F. K. Mack, 150–151.
Automatic Oxygen Cutting Speeds Parts Fabrication—J. O. McElligott and N. C. Brink, 708.
Automatic Welding of Aluminum Fuel Tanks for Rocket-Propelled Missiles—J. R. McFarland and Harold Davis, 810.
Automatic Welding Processes Boost Production of Hot-Water Heaters, 259–260.
Back-to-Back Setup for Semiautomatic Welding of Trailer Frame Beams—Albert T. Bavaria, 491.
Carbon Dioxide and Argon Used on Different Seams for High-Volume Welding—F. K. Mack, 150–151.
Carbon Dioxide Process Handles Automatic Welding of Rear-Axle Housings, 803.
Carrier Elevator is Largest All-Welded Aluminum Structure in USA, 268.
Carrying Coal to Newcastle Was Never Like This, 902–904.
Cylinder Care Cuts Cost, 1100–1101.
Fabrication, Fast, of Fire Bombs—Larry Kunkler, 263–264.
Gas-Shielded Metal-Arc Spot Welding on Turbine Components—Lou Ames, 802–803.
Hard-Surfaced Plow Shares, New Facts About, 43–44.
Hard Surfacing for Refinery Catalyst Unit Component, Triple Life Through, 809.
Heat Transfer and Corrosion Problems Solved with Sprayed Metals, 382.
High Speed Plus High Quality, 149–150.
High-Speed Welding of Bumper Guard Models, 46.
How to Slice Thick Steel with Oxygen Cutting, 900–901.
Hundreds of Dollars Saved Extending Service Life of Cutter Head, 153.
Inert-Gas Metal-Arc Welding Prevents B-52 Production Delay, 709.
Inert-Gas Tungsten-Arc Welds Reach Outer Space, 1004–1005.
Iron-Powder Electrode Effectively Used in Fabricating Turnpike Expansion Joint—Robert Hall, 264.
Iron-Powder Electrodes Cut Welding Time on Fork-Truck Frames—Ray Zeh, 1099–1100.
Large Steam Valve Welded Without Preheat—H. B. Bott, 712–713.
Launching a Welded Aluminum Yacht—G. E. Wendlandt, 598.
Machine Shaves Work Minutes to Seconds, 492–493.
Modern Welding Procedures Speed Completion of 290-Ft Oil Barge—Donald Hastings, 261–262.
Multipass Welding of Steel Pipe with CO_2—E. A. Quinlan, Don Alrick and A. P. Demmer, 710.
New Building Has Miles of Welding in Unique External Columns—Russell S. Hale, 711–712.
Nickel-Core Electrode, $11.35 Spent for, Saves $1600 Iron Casting—Harry Peacor, 1098–1099.
Oxygen Cutting, Mechanized, Contributes to Accelerated Production of Turbine Generators—J. F. Buerkel, 266–267.
Packaged Machine Welding—J. H. Berryman and W. T. Davis, 1003–1004.
Plug-Welding Job Simplified by CO_2 Process, 599.
Pressure Welds Reach 500,000 Mark, 489–490.
Process Change Quadruples Welding Speed on Aluminum Pistons—S. L. Sullivan and J. A. Gowen, 379–380.
Rotary Drum Stores Pre-Mixed Flux for Brazing Operation, 262.
Scrapping for Power—J. M. Heller, 808–809.
Standardized Braces and Corners Designed to Improve Appearance of Weldments, 812.
Submerged-Arc Welding Goes to Sea, 597.
Surfacing Means Saving, 714.
Tractor Company Welds Galvanized Iron with Aluminum Bronze—C. N. Kenney, 811.
Tungsten-Arc Welding Does the Job, Engines or Eggbeaters, 45.

Tungsten-Arc Welding, Mechanized, Is Vital Part of High-Production Plant, 152–153.
Tungsten-Arc Welding Licks Aluminum Troubles, 807.
Viaduct Sets Welded-Girder Record—Edward J. Ramer, 1000–1001.
Welded Truck Tank Prevents Liquid Propane Spillage, 382.
Welding All-Aluminum Superstructures for U. S. Navy Destroyers—Ralph Bradway and C. G. Serroi, 257–258.
Welding—Key to Exposed Steel-Frame Building—William Brooks, 806–807.
Welding Treasure Islands, 813.

Pressure Vessels, Welding Problems in, for Nuclear Reactors—R. E. Lorentz, Jr., 881–887.
Proximity Limit Switch—A Versatile Tool for Industry—R. C. Mierendorf, 1179–1183.

Recent Developments in Magnetic-Force Welding—E. J. Funk, 576–582.
Regulated and Programmed Resistance-Welding Control Systems—C. Sinclair and F. S. Parker, 463–465.
Resistance-Heating Process, Metals Gathering by—W. F. Haessly, 132–140.
Resistance-Welding Control Systems, Regulated and Programmed—C. Sinclair and F. S. Parker, 463–465.
Resistance Welding, High-Frequency—Wallace C. Rudd, 703–707.
Resistance-Welding Machines, New Concept for Control of—W. J. Farrell and J. L. Solomon, 356–362.
Rockets for Steel Hardening—James A. Browning, 225–229.
Roll Planishing Improves Weld-Joint Efficiency and Quality—H. L. Meredith and B. R. Russell, 113–117.

Satisfactory Base-Quality Steel for Both Riveted and Welded Structures—J. O. Jackson, 1184–1188; Discussions: by Nathan W. Morgan, 1188–1189; by John E. South, 1189; by Henry J. Sietina, 1189–1191; by Van Rensselaer P. Saxe 1191–1193; Author's Reply, 1193–1194.
Shielding Gases for Inert-Gas Welding—W. H. Helmbrecht and G. W. Oyler, 969–979.
Short Course in Welded Rigid-Frame Design—Martin P. Korn, 236–239.
Silver Brazing Lap Joints in Stainless-Steel Tubing—Discussion by K. M. Weigert, 998; Author's Reply, 998–999.
Spot Welding, Inert-Gas Tungsten-Arc, of an Automotive Transmission Subassembly—W. G. Mertens and O. J. Ryder, 871–876.
Stainless-Steel Tubing, Silver Brazing Lap Joints in—Discussion by K. M. Weigert, 998; Author's Reply, 998–999.
Stainless Steels, Welding Precipitation-Hardening—Adams Lecture, 1956—George E. Linnert, 9–27.
Structural Fabrication and Erection, Welded Joint Design for Economy in—Omer Blodgett, 118–127.
Study of Interrupted Welding of Heavy-Wall Steam Pipe—I. A. Rohrig, J. O. Smith and E. G. Shifrin, 128–131.
Submerged-Arc Welding, Developed Procedures for the Flexible-Electrode—M. H. Fritsche, 466–474.
Submerged-Arc Welding of Alloy Steels, Bonded Fluxes for—Hallock C. Campbell and Wallace C. Johnson, 1078–1084.

Thermal Analysis of Brazing and Hard-Surfacing Alloys—A Proposed Method—Forbes M. Miller, 986–991.
Titanium in Aircraft Applications, Design and Technique Requirements for Arc Welding—R. Meredith and B. L. Baird, 371–377.
Tungsten-Arc Butt Welding of Zircaloy-2 Tubes, Inert-Gas—J. W. Lingafelter, 230–235.
Tungsten-Arc Welding of Aluminum Alloys, Automatic Inert-Gas-Shielded—H. D. Mann and R. E. Purkhiser, 790–797.
Tungsten-Arc Welding to Carbon-Steel Pipe, Application of Inert-Gas—F. J. Pilia and R. W. Minga, 363–370.
Tungsten-Arc Welding, Argon-Hydrogen Shielding-Gas Mixtures for—T. McElrath and E. F. Gorman, 28–35.

Weld-Joint Efficiency and Quality, Roll-Planishing Improves—H. L. Meredith and B. R. Russell, 113–117.
Welded Joint Design for Economy in Structural Fabrication and Erection—Omer Blodgett, 118–127.
Welder Busway Distribution System, New—Lawrence E. Fisher and Robert W. Dailey, 1085–1096.
Welding and Related Procedures Encountered in a Modern Steel Foundry—Samuel W. Gearhart, Jr., 693–702.
Welding of High-Temperature High-Pressure Piping with Chrome-Moly Electrodes—Discussion by D. C. Smith, 41; Author's Reply, 41–42.
Welding Precipitation-Hardening Stainless Steels—Adams Lecture, 1956—George E. Linnert, 9–27.
Welding Problems in Pressure Vessels for Nuclear Reactors—R. E. Lorentz, Jr., 881–887.
Welding Qualification Problem, 888–892.

Zinc Soldering of Aluminum—I. B. Robinson, 992–997.
Zircaloy-2 Tubes, Inert-Gas Tungsten-Arc Welding of—J. W. Lingafelter, 230–235.

WELDING RESEARCH SUPPLEMENT

SUBJECT INDEX

Aluminum Alloys—5052 Tip-Life Studies in the Spot Welding of—R. A. Davis and R. C. McMaster, 235-s to 239-s.
Aluminum and Aluminum Alloys for Pressure Vessels—Marshall Holt, 441-s.
Aluminum to Copper Tubing, Flash Welding of—E. Schneidmadl, 347-s.
Arc—Experimental Welding with the Cone Arc—D. C. Martin and R. E. Monroe, 518-s to 520-s.
Arcs—Studies of Welding Arcs Using Various Atmospheres and Power Supplies—T. H. Hazlett and G. M. Gordon, 382-s to 386-s.
Austenitic Chromium—Manganese Stainless-Steel Weld Metal, Properties of—by W. T. DeLong and H. F. Reid, Jr., 41-s to 48-s.
Austenitic Heat- and Corrosion-Resistant Alloys—Metallurgy of the Welding of—A. H. Waterfield and R. P. Culbertson, 360-s to 365-s.
Austenitic Pipe Welds and Ductility Related to Service Performance of Heavy-Wall—H. M. Soldan and C. R. Mayne, 141-s to 147-s; Discussion by R. M. Curran, A. W. Rankin, J. D. Conrad, E. A. Fox, H. S. Blumberg and R. D. Wylie; Authors' Closure, 147-s to 150-s.
Austenitic Piping Containing Welded Joints at 1200° F, Plastic Ductility of—R. W. Emerson and R. W. Jackson, 89-s to 104-s.
Austenitic Welds in Type 502 Steel Piping—H. G. Geerlings and W. P. Kerkhof, 119-s.
Brass Spot Welding—Slope Control on Single-Phase Equipment—L. E. Mills and H. C. Wolfe, 423-s to 428-s.
Brazed Joints in Copper Alloys, Strength of—W. H. Munse and J. S. Alagia, 177-s to 184-s.
Additional figures—312-s.
Brazing-Alloy Developments, A New-Nickel Boron Phase Diagram for—G. S. Hoppin, 528-s to 530-s.
Brazing Alloys—Self-Fluxing Airproof—N. Bredzs and H. Schwartzbart, 348-s to 352-s; Discussion by W. M. Lehrer, 352-s; Author's Closure, 352-s.
Brazing Alloys—Sodium Corrosion and Oxidation Resistance of High-Temperature—G. M. Slaughter, C. F. Leitten, Jr., P. Patriarca, E. E. Hoffmann and W. D. Manly, 217-s to 225-s.
Brazing Alloys for Thin Sections of Stainless Steel—A. S. McDonald, 131-s to 140-s.
Brazing—The Experimental Determination of Bonding Temperature—G. Blanc and R. D. Wasserman, 419-s to 421-s.
Brazing Filler Materials, Basic Characteristics of Some Heat-Resisting, Discussion by Forbes M. Miller and R. L. Peaslee, 490-s to 493-s.
Brazing of a High-Temperature Alloy—G. Aggen, R. A. Long and E. E. Reynolds, 366-s to 372-s.
Brazing—High-Temperature of Aluminum Bronze to Inconel—Donald Caplan and Ernest F. Nippes, 457-s to 464-s.
Brazing—Vacuum-Metallurgical Research Gives Industry a Glimpse into the Future—R. C. Bertossa, 483-s to 488-s.

Brittle Fracture—Crack Initiation and Propagation in the V-Notch Charpy Impact Specimen—Carl E. Hartbower, 494-s to 502-s.
Brittle Fracture—Effect of Metallurgical Variables on Transition Behavior in Charpy Slow-Bend and Impact Tests—C. E. Hartbower, 401-s to 409-s.
Brittle Fracture—Evaluation of Weld-Joint Flaws as Reinitiating Points of—D. C. Martin, R. S. Ryan and P. J. Rieppel, 244-s to 251-s.
Brittle Fracture Influence on Design and Residual Stress—J. L. Thomas, 387-s to 392-s.
Brittle Fracture Initiation Tests—by C. Mylonas, D. C. Drucker and L. Isberg, 9-s to 17-s.
Brittle Fracture—Propagation in Wide Steel Plates—W. J. Hall, R. J. Mosborg and W. J. McDonald, 1-s to 8-s.
Brittle Fracture—Relation of Charpy Impact Properties to Microstructure of Three Ship Steels—W. S. Owen, D. H. Whitmore, Morris Cohen and B. L. Averbach, 503-s to 511-s.
Brittle Fracture Tests, Results of—F. Hebrant, H. Louis, W. Soete and A. Vinckier, 414-s, 418-s and 428-s.
Brittle Fractures in Wide Steel Plates Arrested—R. J. Mosborg, W. J. Hall and W. H. Munse, 393-s to 400-s.

Copper Alloys—Strength of Brazed Joints in—W. H. Munse and J. S. Alagia, 177-s to 184-s.
Additional figures—312-s.
Copper Tubing—Flash Welding of Aluminum—E. Schneidmadl, 347-s.
Corrosion Resistance of No. 20 and No. 20 Cb Stainless Steel Welds—H. C. Campbell, T. J. Moore, and S. E. Tyson, 353-s to 359-s.
Crack-Arrestors—of Brittle Fractures in Wide Steel Plates—R. J. Mosborg, W. J. Hall and W. H. Munse, 393-s to 400-s.
Cutting Oxygen, Fundamental Concepts of—R. L. Stoecker and W. B. Moen, 151-s to 156-s.
Correction—329-s.

Design—Its Influence on Residual Stress and Brittle Fracture—J. L. Thomas, 387-s to 392-s.

Electrodes—The Atmospheric Water Vapor Effects on Burn-Off Loads—R. H. Benner, 2nd and T. B. Jones, 263-s to 264-s.
Electrodes—Coating Ingredients' Influence on Surface Tension, Arc Stability and Bead Shape—T. H. Hazlett, 18-s to 22-s.
Electrodes—Heat Output, Penetration and Arc Force of—F. Erdmann-Jesnitzer and K. Primke, 472-s.
Electrodes—Selection of Welding-Rod Chemical Composition Through Mathematics—G. H. Bohn, 541-s to 549-s.
Electro-Slag Process—Welding Heavy Sections by the Russians—W. Anders, 290-s, 306-s, 311-s.
Electro-Slag Welding Process—381-s, 392-s.

Fatigue—Behavior of Welded Built-Up Beams Under Repeated Loads—by J. E. Stallmeyer, W. H. Munse and B. J. Goodal, 27-s to 36-s.
Fatigue—Effect of Plastic Fatigue on Pressure Vessel Material and Design—L. F. Kooistra, 120-s to 130-s; Discussion by J. J. Murphy, and D. B. Rossheim, 429-s to 431-s; Author's Closure, 431-s, 432-s.
Fatigue Resistance of Simulated Nozzles in Model Pressure Vessels—G. Welter and J. Dubuc, 271-s to 274-s.
Fatigue Strength of Built-up Medium-Carbon-Steel Shafts—Netherlands Welding Research Committee, 140-s.
Flash Welding Aluminum to Copper Tubing—E. Schneidmadl, 347-s.
Flash Welding of Steels—Studies of Upset Variables in—E. F. Nippes, W. F. Savage, G. Grotke and S. M. Robelotto, 192-s to 216-s.
Flaw Evaluation as Reinitiating Points of Brittle Fracture—D. C. Martin, R. S. Ryan and P. J. Rieppel, 244-s to 251-s.

Gas-Shielded Arc Welding—Metal Transfer Characteristics in—H. C. Ludwig, 23-s to 26-s.

Heat Treatment of Carbon and Low-Alloy Pressure Vessel Steels—O. R. Carpenter and C. Floyd, 67-s to 76-s.
High-Strength Pressure-Vessel Steels in Heavy Sections, Welding of—A. P. Bunk, 62-s to 66-s.

Inert Gas-Shielded Arc Welding—Metal Transfer Characteristics in—by H. C. Ludwig, 23-s to 26-s.
Irradiation Effects on the Mechanical Properties of Some Structural Steels—E. E. Baldwin, 342-s to 347-s.
Irradiation Effects of Weldability of ASTM A212, Grade B—W. R. Hutchinson, 105-s to 112-s.

Magnesium Alloys—The Welding of—Paul Klain, 321-s to 329-s.
Molybdenum—Ductility of Tungsten-Arc Welds in—N. E. Weare, R. E. Monroe and D. C. Martin, 291-s to 300-s.
Molybdenum—Effects of Nitrogen on the Soundness and Ductility of Welds in—W. N. Platte, 301-s to 306-s.

Nickel Alloy—High Temperature Brazing of Aluminum Bronze to Inconel—Donald Caplan and Ernest F. Nippes, 457-s to 464-s.
Nickel and High Nickel Alloys—Practical Welding Metallurgy of—G. R. Pease, 330-s to 334-s.
Nodular Cast-Iron Welding Rod for Foundries and Fabricators—R. O. Day, J. S. Snyder and H. V. Inskeep, 410-s to 414-s.
Notched Brittleness Tests Employing a Notched Weld—Discussion by Henri M. Schnadt, 8-s, 17-s, 22-s, 26-s; Reply by W. S. Pellini, 26-s, 36-s, 56-s.
Notch-Toughness Characteristics of Submerged-Arc Weld Deposits—I. L. Stern, N. A. Kahn and H. Nagler, 226-s to 234-s.
Notch-Toughness Tests for Welded Steel and Related Behavior of—W. J. Murphy, W. D. McMullen and R. D. Stout, 307-s to 311-s; Discussion by W. S. Pellini and P. P. Puzak, 511-s to 512-s.
Nuclear—Effect of Neutron Irradiation on the Mechanical Properties of Some Structural Steels—E. E. Baldwin, 342-s to 347-s.
Nuclear Irradiation Effects of Weldability of ASTM A212, Grade B—W. R. Hutchinson, 105-s to 112-s.
Nuclear—Sodium Corrosion and Oxidation Resistance of High-Temperature Brazing Alloys—G. M. Slaughter, C. F. Leitten, Jr., P. Patriarca, E. E. Hoffmann and W. D. Manly, 217-s to 225-s.

Oxygen Cutting—Fundamental Concepts of—R. L. Stoecker and W. B. Moen—151-s to 156-s.
Correction—329-s.

Penstocks—Quality Control of Steels for—W. Stauffer and A. Keller, 359-s, 365-s and 372-s.
Pipe Welds—Ductility Related to Performance of Heavy-Wall Austenitic—H. M. Soldan and C. R. Mayne, 141-s to 147-s; Discussion by R. M. Curran, A. W. Rankin, J. D. Conrad, E. A. Fox, H. S. Blumberg and R. D. Wylie; Authors' Closure, 147-s to 150-s.
Piping Austenitic, Containing Welded Joints at 1200° F—R. W. Emerson and R. W. Jackson, 89-s to 104-s.
Piping—Austenitic Welds in Type 502 Steel—H. G. Geerlings and W. P. Kerkhof, 119-s.
Plastic Behavior of Structural Members and Frames—G. C. Driscoll, Jr. and L. S. Beedle, 275-s to 286-s.
Pressure Vessels—Aluminum and Aluminum Alloys for—Marshall Holt, 441-s.
Pressure Vessel Design, Significance of the Tensile Test to—W. E. Cooper, 49-s to 54-s; Discussion by J. W. Clark and W. A. Woodburn, 54-s to 56-s; Author's reply, 56-s.
Pressure Vessels—Fatigue Resistance of Simulated Nozzles in—G. Welter and J. Dubuc, 271-s to 274-s.
Pressure-Vessel High-Strength Steels in Heavy Sections, Properties and Weldability of—J. H. Gross and R. D. Stout, 157-s to 167-s.
Pressure Vessels—Local Stresses in Spherical Shells from Radial or Moment Loadings—P. P. Bijlaard, 240-s to 243-s.
Pressure Vessel Materials and Design—Effect of Plastic Fatigue on—L. F. Kooistra, 120-s to 130-s; Discussion by J. J. Murphy, and D. B. Rossheim, 429-s to 431-s; Author's Closure, 431-s, 432-s.
Pressure Vessels—Stainless Steel for—A. Grodner, 169-s to 176-s.
Pressure Vessel Steels, Heat Treatment of Carbon and Low-Alloy—O. R. Carpenter and C. Floyd, 67-s to 76-s.
Pressure-Vessel Steels in Heavy Sections, Welding of High-Strength—A. P. Bunk, 62-s to 66-s.
Pressure Vessel Stresses with Circumferential Ring Stiffeners, F. W. Catudal and R. W. Schneider, 550-s to 552-s.
Pressure Welding, Diffusion Phenomena in—A. G. Guy and A. L. Eiss, 473-s to 480-s.

Quenched and Tempered—T-1 Materials, Problems Associated with Welding of—P. C. Arnold, 373-s to 381-s.
Quenched and Tempered—T-1 Steel, Studies of the Weld Heat Affected Zone of T-1 Steel—R. J. Allio, E. F. Nippes and W. F. Savage, 531-s to 540-s.

Residual Stress and Brittle Fracture—Influence of Design on—J. L. Thomas, 387-s to 392-s.
Residual Stress Measurements of Restrained Weldments—E. H. Kinelski and J. A. Berger, 513-s to 517-s.
Resistance—Spot Welding 65–35 Brass on Single-Phase Equipment with Slope Control—L. E. Mills and H. C. Wolfe, 423-s to 428-s.
Russian Welding Articles Review—G. E. Claussen—334-s.

Spot Welding of 5052 Aluminum Alloy Tip-Life Studies—R. A. Davis and R. C. McMaster, 235-s to 239-s.
Spot Welding 65–35 Brass on Single-Phase Equipment with Slope Control—L. E. Mills and H. C. Wolfe, 423-s to 428-s.

Stainless Austenitic Heat- and Corrosion-Resistant Alloys—Metallurgy of the Welding of—A. H. Waterfield and R. P. Culbertson, 360-s to 365-s.
Stainless Steel Alloys for Brazing Thin Sections of—A. S. McDonald, 131-s to 140-s.
Stainless Steel—Ductility Related to Service Performance of Heavy-Wall Austenitic Pipe Welds—H. M. Soldan and C. R. Mayne, 148-s to 147-s; Discussion by R. M. Curran, A. W. Rankin, J. D. Conrad, E. A. Fox and H. S. Blumberg, R. D. Wylie, 147-s to 149-s; Authors' Closure, 150-s.
Stainless Steel Hot Cracking, Studies on—P. P. Puzak and H. Rischall, 57-s to 61-s.
Stainless Steel—The Plastic Ductility of Austenitic Piping Containing Welded Joints at 1200° F—R. W. Emerson and R. W. Jackson, 89-s to 104-s.
Stainless Steel—Time-Temperature Effect on Properties of Weld Heat-Affected Zone in Type 347—E. F. Nippes, B. Schaaf, W. L. Fleischmann and R. L. Mehan, 265-s to 270-s.
Stainless Steel—Weld Corrosion Resistance of No. 20 and No. 20Cb—H. C. Campbell, T. J. Moore and S. E. Tyson, 353-s to 359-s.
Stainless Steel for Welded Pressure Vessels—A. Grodner, 169-s to 176-s.
Stainless-Steel Weld Metal, Properties of Austenitic Chromium-Manganese—by W. T. DeLong and H. F. Reid, Jr., 41-s to 48-s.
Stainless—Welding of Type 347 Stainless Steels—Arthur Hoerl and Thomas J. Moore, 442-s to 448-s.
Stress Relieving of Weldments—Earl R. Parker, 433-s to 441-s.
Structural Connections—Effect of Impact on Beams—Paul J. Brennan and Harry A. B. Wiseman, 465-s to 472-s.
Structural—Evolution of Steel Bridges in Belgium During the Last 25 Years—G. Willems and R. Fougnies, 456-s.
Structural Fatigue—Behavior of Welded Built-Up Beams Under Repeated Loads—J. E. Stallmeyer, W. H. Munse and B. J. Goodal, 27-s to 36-s.
Structural—An Investigation of Welded Open-Web Expanded Beams—M. D. Altfillisch, B. R. Cooke and A. A. Toprac, 77-s to 88-s.
Structural Members and Frames, Plastic Behavior of—G. C. Driscoll, Jr., and L. S. Beedle, 275-s to 286-s.
Submerged-Arc Weld Deposits, Notch-Toughness Characteristics of—I. L. Stern, N. A. Kahn and H. Nagler, 226-s to 234-s.

Titanium and Its Alloys—Effects of Interstitial Elements on Weldability of Ti-7% Al-3% Mo and Ti-6% Al-4% V—J. F. Rudy, J. B. McAndrew and H. Schwartzbart, 313-s to 320-s.
Titanium Investigation of the Mechanical Properties of Metal-Arc Welded Ti-6% Al-4% V—D. M. Daley, Jr. and C. E. Hartbower, 185-s to 191-s.
Titanium—The Notch Toughness of Weld Deposits on Commercial Titanium Alloys—D. M. Daley, Jr. and C. E. Hartbower, 527-s, 549-s, 552-s.
Titanium Weldments—Steel Corrosion of—R. Meredith and W. L. Arter, 415-s to 418-s.
Transition Behavior in Charpy Slow-Bend and Impact Tests as Effected by Metallurgical Variables—C. E. Hartbower, 401-s to 409-s.
Transition Temperature—Brittle Fracture Initiation Tests—by C. Mylonas, D. C. Drucker and L. Isberg, 9-s to 17-s.
Transition Temperature—Brittle Fracture Propagation in Wide Plates—W. J. Hall, R. J. Mosborg and W. J. McDonald, 1-s to 8-s.
Transition Temperature—Crack Initiation and Propagation in the V-Notch Charpy Impact Specimen—C. E. Hartbower, 494-s to 502-s.
Transition Temperature, Effect of Specimen Geometry on Charpy Low-Blow—G. M. Orner and Carl E. Hartbower, 521-s to 527-s.
Transition Temperature—Notch Brittleness Tests Employing a Notched Weld—Discussion by Henri M. Schnadt, 8-s, 17-s, 22-s, 26-s; Reply by W. S. Pellini, 26-s, 36-s, 56-s.
Transition Temperature—Notch-Toughness Characteristics of Submerged-Arc Weld Deposits—I. L. Stern, N. A. Kahn and H. Nagler, 226-s to 234-s.
Transition Temperature—Relation of Charpy Impact Properties to Microstructure of Three Ship Steels—W. S. Owen, D. H. Whitmore, Morris Cohen and B. L. Averbach, 503-s to 511-s.
Tungsten Electrodes—A Comparative Study of Thoriated, Zirconiated and Pure—L. P. Winsor and R. R. Turk, 113-s to 119-s.
Correction—422-s.

Weldability—Effect of Metallurgical Variables on Transition Behavior in Charpy Slow-Bend and Impact Tests—C. E. Hartbower, 401-s to 409-s.
Weldability—The Effect of Quench Aging on the Notch Sensitivity of Steel—J. R. Low, Jr., 464-s.
Weldability—Effect of Time After Deposition on Hydrogen Content and Mechanical Properties of Covered-Electrode Weld Metal—J. Colbus, 489-s.
Weldability—Heat Treatment of Carbon and Low-Alloy Pressure Vessel Steels—O. R. Carpenter and C. Floyd, 67-s to 76-s.
Weldability—High-Strength Pressure-Vessel Steels in Heavy Sections—A. P. Bunk, 62-s to 66-s.
Weldability of High-Strength Pressure-Vessel Steels in Heavy Sections—J. H. Gross and R. D. Stout, 157-s to 167-s.
Weldability of High-Tensile Steels—K. L. Zeyen and H. Schwarz, 480-s to 482-s.
Weldability—Mechanism of Microcracking in Mild-Steel Welding—K. Winterton, 449-s to 456-s.
Weldability—Problems Associated with the Welding of T-1 Material—P. C. Arnold, 373-s to 381-s.
Weldability—Studies of the Weld Heat-Affected Zone of T-1 Steel—E. F. Nippes, W. F. Savage and R. J. Allio, 531-s to 540-s.
Weld Metal Factors Affecting the Tensile Properties of—C. M. Wayman and R. D. Stout, 252-s to 262-s.

X-Ray Diffraction for Residual Stress Measurements of Restrained Weldments—E. H. Kinelski and J. A. Berger, 513-s to 517-s.

Zircaloy-2 Arc Welding of Vacuum and Inert-Atmosphere—H. C. Ludwig, 335-s to 341-s.
Zircaloy-2 Corrosion Resistance of Brazements in High-Temperature Water—J. B. McAndrew, H. Schwartzbart and R. Necheles, 287-s to 290-s.
Zircaloy-2, Notch Slow-Bend Testing of—by R. G. Wheeler, 37-s to 40-s.
